

# WHAT IS FSC CERTIFICATION?

**FSC** stands for **Forest Stewardship Council**, an independent organisation that sets high standards for responsible forest management.

When a product carries **FSC accreditation or the FSC logo**, it means the wood, paper, or other forest material used has been **sourced responsibly**, ensuring that forests are protected, workers are treated fairly, and local communities benefit.

## What FSC Certification Guarantees

### 1. Sustainable forestry

The trees come from forests that are **managed responsibly**, protecting wildlife, water, and soil.

### 2. Social responsibility

Workers' rights and local communities are respected and supported.

### 3. Traceability from forest to product

Every step of production is tracked, so the product can be traced back to **certified forests**.

### 4. Environmentally safe

FSC ensures that **forests are preserved for future generations** and that production doesn't contribute to deforestation.

## Why FSC Matters

- It gives customers **confidence in the product's origin**
- Supports **sustainable and ethical forestry practices**
- Helps protect **forests, wildlife, and communities** worldwide

## In Summary

**FSC accreditation is your assurance that the product comes from responsibly managed forests**, where environmental protection, social responsibility, and traceability are guaranteed.
